

Release Note

Release Date: April 10, 2023

Version Number: 4.0.0

Here is the link to the instructions about how to install and run the application, how to run the web service, and how to test all features of the application:

<https://docs.google.com/document/d/13vS-iEMVO-AllvGeDwtdzvYNdbUZJN4lDgqeUIMeJg4/edit?usp=sharing>

Details for Major Changes Included

- Move notes inside groups back to the “Notes” section
 - In this release, the user is able to move the notes that are inside groups back to the “Notes” section. In other words, the user can remove a note from the group it belongs to and make it not belong to any group (i.e., back to the “Notes” section).
 - In the previous release, the user is only able to put notes into a group and move notes between groups.
- Delete a note directly in the file list view
 - In this release, the user is able to delete a note directly by right-clicking on the selected note and then selecting “Delete Note”.
 - In the previous release, the user needs to go to “Note” in the menu bar, select “Delete Note”, and then select the note they want to delete, and then hit “OK” in the confirmation window to delete it.
- Use hotkeys to toggle the lightweight/heavyweight feature toggle

- In this release, the user is able to use hotkeys “ \backslash + L” to toggle the lightweight/heavyweight feature toggle (The heavyweight mode will contain all the tools brought by the HTML editor; The lightweight mode will only display one line of the tools needed including bold font, italic font, underline and change font and color)
- In the previous release, the user needs to manually toggle the lightweight/heavyweight feature toggle in the toolbar, no hotkeys are supported
- Run the web service from the docker image created from it
 - In this release, we containerized our web service using Docker and now we can run the web service from the created Docker image.
 - In the previous release, we need to run the web service from IntelliJ.

List of Known Issues / Limits

1. None
